Professional Summary

Results-driven AI Engineer with hands-on experience architecting production-grade Agentic AI and RAG systems using LangChain, LangGraph, and modern vector search stacks. Skilled in Python, LLM application development, prompt engineering, and cloud deployment on Azure. Proven track record of building scalable, enterprise-ready AI platforms and passionate about solving real-world problems through autonomous AI and robust backend engineering.

Education

Acropolis Institute of Technology and Research, Indore **2022-2026**
Bachelor of Technology in Computer Science and Information Technology *72 Percentage*

Ujjain Public School **2021-2022**
Senior Secondary (Class XII) *76.6 Percentage*

Jolly Memorial Mission School **2019-2020**
Secondary School (Class X) *78.11 Percentage*

Technical Skills

AI/ML Concepts: Generative AI, RAG, LLMs, Agentic AI, Prompt Engineering, Computer Vision, OpenCV.
Languages/Frameworks:: Java, Python, FastAPI, SQL, Pydantic, LangChain, LangGraph, MCP.
Core Competencies: Critical Thinking, Problem Solving, Team work.
Areas of Interest: Backend Development, Object-Oriented Programming.

Experience

Ethara AI | *Post-LLM Training, Model Evaluation, NLP* Jan 2026 – May 2026

- Evaluated Large Language Model (LLM) outputs for factual accuracy, logical consistency, and instruction adherence under standardized review frameworks.
- Performed benchmarking and comparative analysis to identify hallucinations and alignment gaps.
- Contributed to post-training optimization, improving model response correctness and evaluation efficiency by 68% through structured annotation and feedback loops.

Projects

Financial Report Analyzer | *LLMs, RAG, Python* March 2025 – July 2025

- Built an LLM-powered system to summarize financial reports and answer user queries through natural language.
- Implemented a RAG pipeline with document chunking and embedding-based retrieval for accurate, context-aware responses.
- Extracted key insights such as KPIs, risks, and financial outlook directly from unstructured report data.
- Reduced manual analysis time from approximately 45 minutes to approximately 5 minutes per report..

Video-Based Attentiveness Tracker | *Computer Vision, Machine Learning, Python* Jan 2026 – April 2026

- Developed an AI-driven real-time attentiveness monitoring system by analyzing facial features including eye gaze, head pose, and blink rate using Computer Vision.
- Built a live focus-scoring engine applicable to e-learning platforms, remote work monitoring, and human-computer interaction systems.
- Engineered complete backend pipeline for video processing, feature extraction, attentiveness analytics from scratch.

Achievements

Awards

- Achieved 1st Place in the District-Level General Knowledge Quiz among various institutions.
- Won a competitive chess tournament, demonstrating strong analytical thinking, strategic planning, and decision-making under pressure.

Certifications

- **NPTEL Certifications:** Programming in Java, Design and Analysis of Algorithms, and Software Engineering.
